

## ScanPal2 Guard Tracking System

- Tracking software/scanner solution
- Designed specifically for the Security Industry
- Low-cost yet powerful
- Easy to install, set up and use
- Reporting software
- Rugged, durable and lightweight
- CE & UL Approved

A new, complete guard/personnel tracking software/scanner solution for the Security industry.

The ScanPal2 Guard Tracker is a brand new complete Scanner/Software solution in the shape of a piece of Windows-based software, which, when used in conjunction with the supplied Metrologic ScanPal2 portable data collection terminal, enables the activities of security personnel to be monitored.

Designed to overcome the problem of needing to know and prove when a guard reached a given checkpoint on his nightly rounds - in order to monitor his movements in the event of an incident.

By scanning a barcoded label or tag at fixed points around his beat, attendance and specific timings can be monitored throughout an individual's shift. The data collected by the machine can then be simply downloaded to a Windows 95/98/NT/ME/2000/XP based PC using the software supplied, which then produces a report to give a complete picture of the movements of each guard.

This brand new, low-cost solution is simplicity itself to set up and use. To set up, all you need do is issue each operator with a barcoded card (supplied) which is scanned into the terminal so that they can log in when they come to do their round. They then follow the on-screen instructions which records when they start and finish their round and the time they reach each checkpoint.

Once the round is complete, the user can return to base and download the data by placing the scanner into the combined charger/download cradle. Then, with just one keystroke the data is transferred to the software. Reports on each guard and their movements for a specified period can then be printed and/or saved.

Compact in design, the CE & UL approved ScanPal2 is rugged, lightweight, durable and designed for single-handed operation. A brightly lit LCD graphics screen with built-in contrast control allows the user to adjust the brightness of the screen, enabling it to be read perfectly in all lighting conditions. A leather case with belt-clip can also be supplied to protect the terminal.
